

Science a la Cart: Attraction

Come to the Lakeshore Museum Center on Valentine's Day and find our rolling science cart as we look at the science of attraction in its many forms. Come learn about magnets, static electricity, gravity, and surface tension. Science a la carts provide hands on science experiments for all ages. Try different types of magnets and see how strong their attraction is; find out how static electricity is produced and how it causes attraction of charges; learn about the attraction between particles of water that allow amazing things to happen; and see how gravity's attraction causes all objects to be attracted to each other. Science a la Carts are free and require no RSVP.

Open House Style Event
February 14, 2:00-4:00
Lakeshore Museum Center
